

Learnlytica Chat Summary

Generated on: 2026-09-09

Session highlights:

- Implemented PrismaService & PrismaModule connecting NestJS with Prisma ORM.
- Configured CORS, ValidationPipe, and global "/api" prefix on the backend.
- Enhanced Students, ActivityLog, Readiness, and Dashboard modules with persistence & graceful fallbacks.
- Added ProblemsModule with problem bank, solution submission evaluation, and activity fact generation.
- Created database seeder (prisma/seed.ts) and verified all API endpoints live.
- Diagnosed and resolved Google OAuth Error 400 (redirect_uri_mismatch).

Key notes & Solutions:

- Backend running live at <http://localhost:3000/api> with full CORS and DTO validation.
- Event loop completed: problem submissions emit immutable ActivityFacts and SkillEvidence.
- Google OAuth Error 400: registered authorized redirect URIs in Google Cloud Console.

Project configuration:

- Monorepo (pnpm): shared, backend (NestJS + Prisma Client v6), frontend (Vite + React + Tailwind)
- Core model: immutable activity facts -> skill evidence -> multi-dimensional readiness projections

Files involved:

- backend/src/prisma/prisma.service.ts & prisma.module.ts
- backend/src/modules/problems/* & backend/src/main.ts
- backend/src/modules/students/*, activity-logs/*, readiness/*, dashboard/*
- backend/prisma/seed.ts & schema.prisma
